

MPI_COMM_FREE or when a call is made explicitly to MPI_COMM_DELETE_ATTR. comm_delete_attr_fn should be of type MPI_Comm_delete_attr_function.

This function is called by MPI_COMM_FREE, MPI_COMM_DELETE_ATTR, and MPI_COMM_SET_ATTR to do whatever is needed to remove an attribute. The function returns MPI_SUCCESS on success and an error code on failure (in which case MPI_COMM_FREE will fail).

The argument comm_delete_attr_fn may be specified as MPI_COMM_NULL_DELETE_FN from either C, C++, or Fortran. MPI_COMM_NULL_DELETE_FN is a function that does nothing, other than returning MPI_SUCCESS. MPI_COMM_NULL_DELETE_FN replaces MPI_NULL_DELETE_FN, whose use is deprecated.

If an attribute copy function or attribute delete function returns other than MPI_SUCCESS, then the call that caused it to be invoked (for example, MPI_COMM_FREE), is erroneous.

The special key value MPI_KEYVAL_INVALID is never returned by MPI_KEYVAL_CREATE. Therefore, it can be used for static initialization of key values.

Advice to implementors. To be able to use the predefined C functions MPI_COMM_NULL_COPY_FN or MPI_COMM_DUP_FN as comm_copy_attr_fn argument and/or MPI_COMM_NULL_DELETE_FN as the comm_delete_attr_fn argument in a call to the C++ routine MPI::Comm::Create_keyval, this routine may be overloaded with 3 additional routines that accept the C functions as the first, the second, or both input arguments (instead of an argument that matches the C++ prototype). *(End of advice to implementors.)*

Advice to users. If a user wants to write a “wrapper” routine that internally calls MPI::Comm::Create_keyval and comm_copy_attr_fn and/or comm_delete_attr_fn are arguments of this wrapper routine, and if this wrapper routine should be callable with both user-defined C++ copy and delete functions and with the predefined C functions, then the same overloading as described above in the advice to implementors may be necessary. *(End of advice to users.)*

MPI_COMM_FREE_KEYVAL(comm_keyval)

INOUT comm_keyval key value (integer)

int MPI_Comm_free_keyval(int *comm_keyval)

MPI_COMM_FREE_KEYVAL(COMM_KEYVAL, IERROR)

INTEGER COMM_KEYVAL, IERROR

{static void MPI::Comm::Free_keyval(int& comm_keyval) *(binding deprecated, see Section 15.2)* }

Frees an extant attribute key. This function sets the value of keyval to MPI_KEYVAL_INVALID. Note that it is not erroneous to free an attribute key that is in use, because the actual free does not transpire until after all references (in other communicators on the process) to the key have been freed. These references need to be explicitly freed by the program, either via calls to MPI_COMM_DELETE_ATTR that free one attribute instance,

Language Bindings Summary

In this section we summarize the specific bindings for C, Fortran, and C++. First we present the constants, type definitions, info values and keys. Then we present the routine prototypes separately for each binding. Listings are alphabetical within chapter.

A.1 Defined Values and Handles

A.1.1 Defined Constants

The C and Fortran name is listed in the left column and the C++ name is listed in the middle or right column. Constants with the type `const int` may also be implemented as literal integer constants substituted by the preprocessor.

MPI Declarations Index

This index refers to declarations needed in C/C++, such as address kind integers, handles, etc. The underlined page numbers is the “main” reference (sometimes there are more than one when key concepts are discussed in multiple areas).
