## Chapter 2

## Change-Log

This annex summarizes changes from the previous version of the MPI standard to the version presented by this document. Only significant changes (i.e., clarifications and new features) that might either require implementation effort in the MPI libraries or change the understanding of MPI from a user's perspective are presented. Editorial modifications, formatting, typo corrections and minor clarifications are not shown.

## 2.1 Changes from Version 2.1 to Version 2.2

- Section 2.5.4 on page 14.
   It is now guaranteed that predefined named constant handles (as other constants) can be used in initialization expressions or assignments, i.e., also before the call to MPI\_INIT.
- 2. Section 2.6 on page 15, Section 2.6.4 on page 18, and Section ?? on page ??.

  The C++ language bindings have been deprecated and will be removed in a future version of the MPI specification.
- 3. Section 3.2.2 on page 27.

  MPI\_CHAR for printable characters is now defined for C type char (instead of signed char). This change should not have any impact on applications nor on MPI libraries (except some comment lines), because printable characters could and can be stored in any of the C types char, signed char, and unsigned char, and MPI\_CHAR is not allowed for predefined reduction operations.
- 4. Section 3.2.2 on page 27.
  MPI\_(U)INT{8,16,32,64}\_T, MPI\_AINT, MPI\_OFFSET, MPI\_C\_BOOL,
  MPI\_C\_COMPLEX, MPI\_C\_FLOAT\_COMPLEX, MPI\_C\_DOUBLE\_COMPLEX, and
  MPI\_C\_LONG\_DOUBLE\_COMPLEX are now valid predefined MPI datatypes.
- Section 3.4 on page 38, Section 3.7.2 on page 49, Section 3.9 on page 68, and Section 5.1 on page 129.
   The read access restriction on the send buffer for blocking, non blocking and collective API has been lifted. It is permitted to access for read the send buffer while the operation is in progress.
